**General Description**

The TYCO DV-5A Red-E Cabinet is a pre-assembled fire protection valve package enclosed within a free-standing cabinet designed to occupy minimal floor space and to provide an aesthetically pleasing enclosure for a fire protection valve riser. The entire package is pre-wired and the water inlet and outlets to the valve riser are grooved to provide minimal installation time. The valve package includes the system (manual) shut-off control valve, automatic water control valve, and water-flow/supervisory switches. A built-in air compressor with associated controls provides an automatic air supply for use as either supervision and pneumatic actuation of the automatic water control valve.

Integral to the DV-5A Red-E Cabinet is a control panel and back-up batteries for providing electrical alarm, supervisory, and trouble functions. All switches within the cabinet are pre-wired to the control panel, making the electrical connections for power, detection circuits, and alarms the only remaining connections to complete the system.

In addition to the control panel being integral to the DV-5A Red-E Cabinet, windows have been provided in the door for viewing the releasing panel functions and essential system pressure gauges. A lock for the control panel access door is standard, and a lock for the cabinet door is optional.

Features and benefits are as follows:
- aesthetically pleasing appearance
- professionally assembled
- internally wired
- custom manufactured
- all gauges and panel display are externally visible

- industrial grade rollers (4) are standard at bottom of cabinet
- forklift compatible
- two-door cabinet design for ease of maintenance
- internal, gauge panel, and control panel lighting
- optional Model QRS Electronic Accelerator for the 6 in. and 8 in. Double Interlock Electric/Electric Actuation system types
- optional seismic kit

The DV-5A Red-E Cabinet has been designed to readily incorporate 1-1/2 to 8 in. (DN40 to DN200) valve risers for the following types of preaction systems:
- Single Interlock Wet Pilot Actuation
- Single Interlock Dry Pilot Actuation
- Single Interlock Electric Actuation
- Double Interlock Electric/Pneumatic
- Double Interlock Electric/Electric
- Preaction Type A

**Technical Data**

**Approvals**

UL and C-UL Listed, FM Approved

**System Types**

Single Interlock Electric Actuation
- Double Interlock Electric/Pneumatic Actuation
- Double Interlock Electric/Electric Actuation

**Working Pressure Range**

DV-5A Valve: 20 to 300 psi (1,4 to 20,7 bar)

**Construction**

The Red-E Cabinet is constructed of 14 gauge steel and is free standing. The standard paint finish is bright red and black. The front doors of the enclosure are fully hinged (and removable) and open nearly to the cabinet floor level allowing easy access to the couplings when connecting the water supply and drain. Pre-drilled holes on tabs along the base of the cabinet provide an anchor point for the cabinet to be secured to the floor when required. Industrial grade rollers at the bottom of the cabinet are standard. Internal controls that provide functions to reset a system after operation (for example, alarm test valve, main drain valve, etc.) are individually tagged for easy identification. All prefabricated piping is Schedule 40 steel.

A Splash-resistant Drain Cup is provided that ensures water does not splash into the cabinet during flow testing. The discharging water can be

### NOTES

1. All pipe connections are grooved
2. Supply and drain header connections made internal to cabinet

---

**FIGURE 1**

INSTALLATION DIMENSIONS AND REFERENCE POINTS
observed through a clear tube attached to the drain cup. It is designed with a fail-safe feature allowing water to over-flow in the event the drain is blocked.

The Hard Piped Funnel Drain is connected through a Swing Check Valve to the Main Drain Header, eliminating the need to run a separate drain line from the funnel. The cabinet floor is provided with a drain opening to allow water to drain out. A plug is also provided to prevent water from draining from the cabinet if necessary.

The Air Supply connection for cabinets without compressors (using AMD-1) are terminated at a common height across all model sizes allowing the connection of groups of cabinets easier. This allows a single tank mounted compressor sized to meet the requirements of the largest system in the group to supply all the cabinets in the group, or alternatively, connect to the factory air supply. The air supply line contains a tee and plug which is used to connect a hydraulic test pump that pressurizes the sprinkler system above the butterfly valve for hydraulic testing of the system in accordance with NFPA 13.

Table A provides list of riser components and a cross reference to individual Technical Data Sheets, as well as individual component laboratory approval information.

Figure 1 provides dimensional information for Red-E Cabinets, and Figure 2 illustrates the typical assembly arrangement.

**Design Considerations**

The automatic sprinklers and/or nozzles, fire detection devices, manual pull stations, and signaling devices that are to be utilized with the Red-E Cabinet must be UL Listed, ULC Listed, C-UL Listed, or FM Approved, as applicable. With reference to Figure 3, the system designer must consider and make preparations for use of a Red-E Cabinet as follows:

- adequate floor space to facilitate opening of the cabinet doors
- minimum ambient temperature of 40°F (4°C)
- installation of a suitably sized water supply to the water supply header (Port B, Figure 1)
- installation of system piping (Port A, Figure 1) including automatic sprinklers and/or nozzles from the Red-E cabinet outlet
- installation of drains from main drain header (Port C, Figure 1)
- installation of the detection system components and alarms
- determination of air compressor size for double interlock preaction systems as a function of system type and volume, see Table B
- power supply to Red-E Cabinet
- separate power supply to the air compressor

**Installation**

The TYCO Red-E Cabinet is to be installed following the directions given in the “Red-E Cabinet Installer’s Manual” provided with the Red-E Cabinet. Instructions pertain to the following items:

- placing the cabinet
- connecting the system piping
- electrical connections
- system start-up

**NOTES**

1. The Model PFC-4410RC is standard. The Red-E Cabinet may be ordered without an integral control panel. Preaction Type A systems are not approved for use with PFC-4410RC Control Panel, utilizing model Fast 2000 instead.
2. The Model G16AC812 is utilized to maintain supervisory air pressure in all sizes of Single Interlock Preaction Systems with either Electric Actuation or Wet Pilot Actuation.
3. The Model AMD-1 Air Maintenance Device, in addition to an Auxiliary Air Tank, is utilized as standard equipment in Single Interlock Preaction Systems with Dry Pilot Actuation, as well as Double Interlock Preaction Systems with Electric/Electric Actuation. In the case of Single Interlock Preaction Systems with Dry Pilot Actuation, two AMD-1's are utilized to accomplish the two different pressure settings that are necessary for the system piping and the dry pilot line. In the case of Double Interlock Preaction Systems with Electric/Electric Actuation, one AMD-1 is utilized to maintain the system pressure.
4. The Model AMD-2 Air Maintenance Device and Model AMD-3 Nitrogen Maintenance Device, as well as the Model AMD-1 Air Maintenance Device, are offered as options when the Red-E Cabinet is ordered without a built-in (for example, air compressor) automatic air supply.
5. Approvals under the name of the valve company.
6. Approvals under the name of Potter Electric Signal Company.
7. Approvals for the Compressor and Motor are under the name of General Air Company, and the approvals for the Pressure Operated Switch are under the name of Hubble or Condor.

**NOTES**

1. Unless otherwise specified, 115 VAC, 60 Hz is provided
2. 6 and 8 in. (DN150 and 200) cabinets only
**Care and Maintenance**

The TYCO DV-5 Red E-Cabinet must be maintained and serviced in accordance with this section.

Before closing a fire protection system main control valve for maintenance work on the fire protection system that it controls, permission to shut down the affected fire protection systems must first be obtained from the proper authorities. All personnel who may be affected by this decision must be notified.

Inspection, testing, and maintenance must be performed in accordance with the requirements of the NFPA, and any impairment must be immediately corrected.

The TYCO Red-E Cabinet does not require any regularly scheduled inspection or maintenance. The riser components enclosed within the Red-E Cabinet, however, must be maintained in accordance with their applicable Technical Data Sheet, see Table A. In addition, the Control Panel and Automatic Air Supply components must be maintained in accordance with their applicable instructions provided with the Red-E Cabinet.

The owner is responsible for the inspection, testing, and maintenance of their fire protection system and devices in compliance with this document, as well as with the applicable standards of any authorities having jurisdiction. Contact the installing contractor or product manufacturer with any questions.

Automatic sprinkler systems are recommended to be inspected, tested, and maintained by a qualified Inspection Service in accordance with local requirements and/or national codes.

**Red-E Cabinet Technical Support**

Technical support for the Red-E Cabinet is available by calling 888-572-4638 during regular business hours of 8:30-12:00 and 1:00-5:00 Eastern Time Monday through Friday.

Contact Red-E Cabinet Technical Support for special request cabinet configuration or electrical connection/control panel programming inquiries.

An answering service will take messages outside of the regular business hours.
Limited Warranty
For warranty terms and conditions, visit www.tyco-fire.com.

Ordering Procedure
The Part Numbers (P/Ns) in this section are provided for standard cabinets with integral control panel, built-in automatic air supply, for example, air compressor and controls, and galvanized pipe, nipples, and fittings.

DV-5a Red-E Cabinet with Single Interlock Preaction System
Specify: Size (specify) DV-5a Red-E Cabinet with (specify actuation) Single Interlock Preaction System Riser, P/N (specify per Table C)

NOTICE
Electric Actuation and Wet Pilot Actuation are provided standard with the Model G16AC812 Automatic Air Supply utilizing a 1/6 HP motor. Dry Pilot Actuation is provided standard with an OL12516AC (1/6 HP) Air Compressor and Auxiliary Air Tank complete with Model AMD-1 Air Maintenance Devices.

DV-5a Red-E Cabinet with Double Interlock Preaction System and Electric/Electric Actuation
Specify: Size (specify) DV-5a Red-E Cabinet with Electric/Electric-Actuated Double Interlock Preaction System Riser with (specify model from Table B) Air Compressor, P/N (specify per Table C)

DV-5a Red-E Cabinet with Double Interlock Preaction System and Electric/Pneumatic Actuation
Specify: Size (specify) DV-5a Red-E Cabinet with Electric/Pneumatic-Actuated Double Interlock Preaction System Riser with (specify model from Table B) Air Compressor, P/N (specify per Table C)

Special Orders
The DV-5a Red-E Cabinet can be provided as follows as part of a special request cabinet configuration:
• without the control panel
• without built-in automatic air supply, for example, air compressor and controls
• with an optional air/nitrogen maintenance device when ordered without built-in automatic air supply
• with trim black pipe, nipples, and fittings, as may be desired for AFFF systems
• with Model QRS Electronic Accelerator, for the 6 in. and 8 in. Double Interlock Electric/Electric Actuation system types, see Table C note 3

and refer to Technical Data Sheet TFP1100 for more information
• with special size air compressors for single interlock systems
• with 50 Hz air compressors
• with seismic kit. Kit must be ordered separately.

Options
• with sight flow gage (provides a visual indication of flow through the main drain)
• with extra capacity batteries (12V up to 18Ah) for longer battery time and/or systems with heavy power requirements , for example, numerous audible signaling devices
• with Class “A” initiating appliance circuits (this option permits the connection of Class “A” style wiring to the initiating zones)
• with Class “A” indicating appliance circuits (this option permits the connection of Class “A” style wiring to the indicating zones)
• with auxiliary relay modules to provide extra-dry contacts when required; up to an 8 ARM-44 module per cabinet can be added
• with RA-4410 RC Remote Annunciator

Contact Red-E Cabinet Technical Support for information about special request cabinet configurations.
