Model ESFR-22
22.4 K-factor Pendent Sprinklers
Early Suppression, Fast Response

General Description

TYCO Model ESFR-22 Pendent Sprinklers are Early Suppression, Fast Response Sprinklers having a nominal K-factor of 22.4 (Ref. to Figure 1). They are suppression-mode sprinklers that are especially advantageous as a means of eliminating the use of in-rack sprinklers when protecting high-piled storage.

The Model ESFR-22 Sprinklers are primarily used for ceiling-only sprinkler protection of (but not limited to) the following storage applications:

- most encapsulated or non-encapsulated common materials including cartoned, unexpanded plastics
- uncartoned (exposed) expanded plastics in accordance with NFPA 13 and FM Global standards
- some storage arrangements of rubber tires, roll paper, flammable liquids, and aerosols

For more specific criteria, refer to Table A as well as the applicable design standard.

The Model ESFR-22 can protect a storage arrangement of 40 ft (12.2 m) with a ceiling height of 45 ft (13.7 m) without requiring in-rack sprinklers. In addition, it can be installed with a maximum deflector-to-ceiling distance of 18 in. (460 mm).

Applications for TYCO ESFR Sprinklers are expanding beyond currently recognized installation standards. For information on research fire tests (for example, with flammable liquids and aerosols) that may be acceptable to an authority having jurisdiction, contact Johnson Controls Technical Services.

**NOTICE**

The Model ESFR-22 Sprinklers described herein must be installed and maintained in compliance with this document, as well as with the applicable standards of the National Fire Protection Association (NFPA), in addition to the standards of any authorities having jurisdiction (for example, FM Global). Failure to do so may impair the performance of these devices.

The owner is responsible for maintaining their fire protection system and devices in proper operating condition. Contact the installing contractor or product manufacturer with any questions.

In all cases, the appropriate NFPA or FM installation standard, or other applicable standard, must be referenced to ensure applicability and to obtain complete installation guidelines. The general guidelines in this technical data sheet are not intended to provide complete installation criteria.

### Sprinkler Identification Number

Refer to Table A for sprinkler identification number.

### Technical Data

**Approvals**
- UL and C-UL Listed
- FM Approved

**Finish**
- Natural Brass

**Physical Characteristics**
- Frame: Brass
- Deflector: Bronze
- Compression Screw: Stainless Steel
- Hook: MONEL
- Strut: MONEL
- Link Assembly: Solder, Nickel
- Button: Brass
- Sealing Assembly: Beryllium Nickel w/TEFLON

**Additional Technical Data**
Refer to Table A for additional technical data.

### Operation

The fusible link assembly is comprised of two link halves that are joined together by a thin layer of solder. When the rated temperature is reached, the solder melts and the two link halves separate, activating the sprinkler and flowing water.
**Design Criteria**

The following general guidelines provided for the TYCO Model ESFR-22 Pendent Sprinklers can be used for a quick reference.

The National Fire Protection Association (NFPA) and FM Global (FM Approvals) provide installation standards that must be used to properly design an automatic sprinkler system utilizing Early Suppression, Fast Response (ESFR) Sprinklers. The guidelines provided by NFPA and FM Approvals may differ. Consequently, the appropriate standard must be used for a given installation.

In all cases, the appropriate NFPA or FM Approvals installation standard must be referenced to ensure applicability and to obtain complete installation guidelines. The following general guidelines are not intended to provide complete installation criteria. Refer to Table B for additional information.

In addition to this technical data sheet, the following Technical Data Sheets describe other TYCO ESFR Sprinklers:

- **TFP312**
  Model ESFR-25 (TY9226)
  K=25.2 Pendent Sprinkler

- **TFP315**
  Model ESFR-17 (TY7226)
  K=16.8 Pendent Sprinkler

- **TFP316**
  Model ESFR-17 (TY7126)
  K=16.8 Pendent Sprinkler

- **TFP317**
  Model ESFR-17 (TY7223)
  K=16.8 Pendent Sprinkler

- **TFP318**
  Model ESFR-1 (TY6226)
  K=14.0 Pendent Sprinkler

- **TFP319**
  Model ESFR-14 (TY6236)
  K=14.0 Pendent Sprinkler

- **TFP320**
  Model ESFR-17 (TY7229)
  K=16.8 Pendent Sprinkler

**Roof Construction**

Unobstructed or obstructed construction, such as smooth ceiling, bar joists, beam and girder, etc. Where the depths of the solid structural members, (for example, beams and stem) exceed 12 in. (302 mm), install ESFR Sprinklers in each channel formed by the structural members.
## Ceiling Slope
Maximum 2 in. rise for 12 in. run (16.7%)  

## Maximum Coverage Area
100 ft² (9.3 m²)  
In some cases, the installation standards permit a greater coverage area.

## Minimum Coverage Area
64 ft² (5.8 m²) per NFPA 13 / FM Global 2-0

## Maximum Spacing
- 12 ft (3.7 m) for building heights up to 30 ft (9.1 m)  
- 10 ft (3.1 m) for building heights greater than 30 ft (9.1 m); in some cases, installation standards permit a greater spacing

## Minimum Spacing
8 ft (2.4 m)

## Minimum Clearance to Commodity
36 in. (914 mm)

## Deflector-to-Ceiling Distance
NFPA – 6 to 18 in. (152 to 457 mm)

## Centerline of Thermal Sensing Element-to-Ceiling Distance
FM Global – See FM Global 2-0 for Storage Sprinklers

Open Frame (i.e., no solid shelves) Single, Double, Multiple-Row, or Portable Rack Storage of Class I-IV and Group A or B Plastics
- Refer to NFPA 13  
- Refer to FM 2-0 and 8-9

Solid Pile or Palletized Storage of Class I-IV and Group A or B Plastics
- Refer to NFPA 13  
- Refer to FM 2-0 and 8-9

Idle Pallet Storage
- Refer to NFPA 13  
- Refer to FM 2-0, 8-9, and 8-24

Rubber Tire Storage
- Refer to NFPA 13  
- Refer to FM 2-0 and 8-3

Roll Paper Storage (Refer to the Standard)
- Refer to NFPA 13  
- Refer to FM 8-21

Flammable/Ignitable Liquid Storage (Refer to the Standard)
- Refer to NFPA 30  
- Refer to FM 7-29

Aerosol Storage (Refer to the Standard)
- Refer to NFPA 30B  
- Refer to FM 7-31

Automotive Components in Portable Racks (Control mode only; refer to the Standard)
- N/A  
- N/A

N/A – Not Applicable
**Installation**

TYCO Model ESFR-22 Pendent Sprinklers must be installed in accordance with this section.

**General Instructions**

Damage to the fusible Link Assembly during installation can be avoided by handling the sprinkler by the frame arms only (that is, do not apply pressure to the fusible Link Assembly), and by using the appropriate sprinkler wrench. Failure to do so can lead to an unstable link assembly and premature activation of the sprinkler. Damaged sprinklers must be replaced.

A leak-tight 1 in NPT sprinkler joint should be obtained by applying a minimum-to-maximum torque of 20 to 30 lb-ft (26.8 to 40.2 N·m). Higher levels of torque can distort the sprinkler inlet with consequent leakage or impairment of the sprinkler.

**Note:** Install the Model ESFR-22 Pendent Sprinkler in the pendent position (Ref. Figure 2).

**Step 1.** With pipe-thread sealant applied, hand-tighten the sprinkler into the sprinkler fitting. Do not apply pressure to the Link Assembly, and handle the Model ESFR-22 Pendent Sprinkler only by the Frame arms.

**Step 2.** Use only the W-Type 1 Sprinkler Wrench (Ref. Figure 2) to install the Model ESFR-22 Pendent Sprinkler. Fully engage (seat) the wrench recess on the sprinkler wrench flats (Ref. Figure 1) and wrench-tighten.

**Step 3.** After installation, inspect the Link Assembly of each Model ESFR-22 Pendent Sprinkler for damage. In particular, verify that the Link Assembly and Hook are positioned as illustrated in Figures 1 and 2, and that the Link Assembly is not bent, creased, or forced out of normal position in any way. Replace damaged sprinklers.

## Care and Maintenance

TYCO Model ESFR-22 Pendent Sprinklers must be maintained and serviced in accordance with this section.

Before closing a fire protection system main control valve for maintenance work on the fire protection system that it controls, obtain permission to shut down the affected fire protection system from the proper authorities and notify all personnel who may be affected by this action.

Sprinklers which are found to be leaking or exhibiting visible signs of corrosion must be replaced.

Automatic sprinklers must never be painted, plated, coated, or otherwise altered after leaving the factory. Modified sprinklers must be replaced. Sprinklers that have been exposed to corrosive products of combustion, but have not operated, should be replaced if they cannot be completely cleaned by wiping the sprinkler with a cloth or by brushing it with a soft bristle brush.

Care must be exercised to avoid damage to the sprinklers before, during, and after installation. Sprinklers damaged by dropping, striking, wrench twist/slippage, or the like, must be replaced.

The owner is responsible for the inspection, testing, and maintenance of their fire protection system and devices in compliance with this document, as well as with the applicable standards of the National Fire Protection Association (for example, NFPA 25), in addition to the standards of any authorities having jurisdiction. Contact the installing contractor or product manufacturer with any questions.

Automatic sprinkler systems are recommended to be inspected, tested, and maintained by a qualified Inspection Service in accordance with local requirements and/or national codes.

## Limited Warranty

For warranty terms and conditions, visit www.tyco-fire.com.

## Ordering Procedure

Contact your local distributor for availability. When placing an order, indicate the full product name and Part Number (P/N).

**Sprinkler Assemblies with 1 Inch NPT Thread Connection**

Specify: Model ESFR-22 (TY8223), K=22.4, Early Suppression, Fast Response Pendent Sprinkler with 1 in. NPT thread connection, (specify) temperature rating, Natural Brass, P/N (specify):

<table>
<thead>
<tr>
<th>Temperature Rating</th>
<th>P/N</th>
</tr>
</thead>
<tbody>
<tr>
<td>165°F (74°C)</td>
