Series TY-L — 5.6 and 8.0 K-factor
Upright and Pendent Intermediate Level Sprinklers
Standard Response

General Description
The Series TY-L, 5.6 and 8.0 K-factor Upright and Pendent Intermediate Level Sprinklers described in this data sheet are automatic sprinklers of the "standard response" solder type. They are "standard spray" sprinklers intended for use in fire sprinkler systems designed in accordance with the standard installation rules recognized by the applicable Listing or Approval agency (e.g., UL Listing is based on NFPA requirements). Both the Pendent and Upright Sprinklers produce a hemispherical water distribution pattern below the deflector.

Intermediate Level Sprinklers are primarily designed for use in rack storage sprinkler systems where their thermally sensitive elements must be shielded from the water spray of higher elevation sprinklers that could operate earlier during a fire. Intermediate Level Sprinklers are also used in other applications such as beneath open gridded catwalks.

NOTICE
The Series TY-L Sprinklers described herein must be installed and maintained in compliance with this document, as well as with the applicable standards of the National Fire Protection Association, in addition to the standards of any other authorities having jurisdiction. Failure to do so may impair the performance of these devices.

Sprinkler Identification Number (SIN)
TY3113 – Upright 5.6K, 1/2"NPT
TY3211 – Pendent 5.6K, 1/2"NPT
TY4113 – Upright 8.0K, 3/4"NPT
TY4211 – Pendent 8.0K, 3/4"NPT
TY3113 is a redesignation for S1809 and G3253
TY3211 is a redesignation for S1801 and G3112
TY4113 is a redesignation for S1822 and G3153
TY4211 is a redesignation for S1811 and G3102

Technical Data
Approvals
UL and C-UL Listed
FM Approved
(Refer to Table A for complete approval information including corrosion resistant status.)

Maximum Working Pressure
175 psi (12.1 bar)

Discharge Coefficient
K = 5.6 gpm/psi (80.6 lpm/bar)
K = 8.0 gpm/psi (115.2 lpm/bar)

Temperature Ratings
Refer to Table A

Finishes
Natural Brass

Physical Characteristics
Frame Brass
Sealing Button Bronze w/TEFLON
Ejection Spring Stainless Steel
Strut MONEL
Hook Bronze/MONEL
Deflector Bronze
Shield Brass
Fusible Element Solder, Copper, Stainless Steel

The owner is responsible for maintaining their fire protection system and devices in proper operating condition. Contact the installing contractor or product manufacturer with any questions.

NOTES
1. Listed by Underwriters Laboratory, Inc. (UL).
2. Listed by Underwriters Laboratory, Inc. for use in Canada (C-UL)
3. Approved by Factory Mutual Research Corporation.

TABLE A
LABORATORY LISTINGS AND APPROVALS
**Operation**

A copper tube sealed by two stainless steel balls holds a fusible alloy. When the rated temperature is reached, the alloy melts, the balls are forced toward each other releasing the tension mechanism, allowing the sprinkler to operate.

**Design Criteria**

The Series TY-L Pendent and Upright Intermediate Level Sprinklers are intended for fire protection systems designed in accordance with the standard installation rules recognized by the applicable Listing or Approval agency (e.g., UL Listing is based on the requirements of NFPA 13, and FM Approval is based on the requirements of FM Global’s Loss Prevention Data Sheets).

**Installation**

The Series TY-L Sprinklers must be installed in accordance with this section.

**NOTE:** A leak-tight 1/2 in. NPT sprinkler joint should be obtained by applying a minimum-to-maximum torque of 7 to 14 lb-ft (9,5 to 19,0 N·m). A leak tight 3/4 in. NPT sprinkler joint should be obtained by applying a minimum-to-maximum torque of 10 to 20 lb-ft (13,4 to 26,8 N·m). Higher levels of torque may distort the sprinkler inlet and cause leakage or impairment of the sprinkler.

**Upright Sprinklers**

The Series TY-L Intermediate Level Upright Sprinklers must be installed in accordance with the following instructions.

**Step 1.** With pipe thread sealant applied to the pipe threads, hand tighten the sprinkler into the sprinkler fitting.

**Step 2.** Tighten the sprinkler into the sprinkler fitting using only the W-Type 9 Sprinkler Wrench (Ref. Figure 3). With reference to Figure 1 or 2, the W-Type 9 Sprinkler Wrench is to be applied to the wrenching area.

**Pendent Sprinklers**

The Series TY-L Intermediate Level Pendent Sprinklers must be installed in accordance with the following instructions.

**Step 1.** Roll one of the two required O-Rings over the sprinkler threads until it seats against the sprinkler wrenching area flange as shown in Figure 1 or 2, as applicable.

**Step 2.** Install the Shield over the sprinkler threads, and then roll the second O-Ring over the sprinkler threads until it is seated firmly against the Shield.

**Step 3.** With pipe thread sealant applied, hand tighten the sprinkler into the sprinkler fitting.

**Step 4.** Tighten the sprinkler into the sprinkler fitting using only the W-Type 9 Sprinkler Wrench (Ref. Figure 3). The wrench is to be applied to the sprinkler wrenching area shown in Figure 1 or 2, as applicable.

When installed correctly, the O-Rings will be slightly compressed and the Shield will be held firmly in place.

**Care and Maintenance**

The Series TY-L Sprinklers must be maintained and serviced in accordance with this section.

Before closing a fire protection system main control valve for maintenance work on the fire protection system that it controls, permission to shut down the affected fire protection system must be obtained from the proper authorities and all personnel who may be affected by this action must be notified.

Sprinklers that are found to be leaking or exhibiting visible signs of corrosion must be replaced.

Automatic sprinklers must never be painted, plated, coated or otherwise altered after leaving the factory. Modified or over-heated sprinklers must be replaced.

Care must be exercised to avoid damage to the sprinklers before, during, and after installation. Sprinklers damaged by dropping, striking, wrench twist/slippage, or the like, must be replaced.

The owner is responsible for the inspection, testing, and maintenance of their fire protection system and devices in compliance with this document, as well as with the applicable standards of the National Fire Protection Association (e.g., NFPA 25), in addition to the standards of any other authorities having jurisdiction. Contact the installing contractor or product manufacturer with any questions.

It is recommended that automatic sprinkler systems be inspected, tested, and maintained by a qualified Inspection Service in accordance with local requirements and/or national codes.
Limited Warranty
For warranty terms and conditions, visit www.tyco-fire.com.

Ordering Procedure
Contact your local distributor for availability. When placing an order, indicate the full product name and Part Number (P/N).

Upright Sprinkler Assemblies with Shield and NPT Thread Connections
Specify: (Specify Model/SIN), Standard Response, (specify K-factor), (specify temperature rating), Series TY-L Upright Intermediate Level Sprinklers with natural brass finish, P/N (specify from Table B)

Pendent Sprinkler Assemblies with Shield Ordered Separately and NPT Thread Connections
Specify: (Specify Model/SIN), Standard Response, (specify K-factor), (specify temperature rating), Series TY-L Pendent Sprinkler with natural brass finish, P/N (specify from Table C)

Model S5 Pendent Shield Package
Specify: S5 Pendent Shield Package (one shield / two O-Rings) for use with (specify 1/2 in. NPT or 3/4 in. NPT) Series TY-L Pendent Sprinklers, P/N (specify)

Sprinkler Wrench
Specify: W-Type 9 Sprinkler Wrench, P/N 56-000-1-849
