Model TN-17
16.8 (K240) K-factor
Horizontal Spray Nozzle, Open

General Description

The TYCO Model TN-17 Horizontal Spray Nozzle having a 16.8 (K240) K-factor is a specialized open nozzle for use in tunnel fire protection deluge systems, providing an improved alternative to traditional designs. With its ability to provide extended coverage, the Model TN-17 Nozzle allows for a single pipe to run the length of a tunnel, compared to traditional designs that use multiple pipes in order to provide sufficient coverage. The Model TN-17 Nozzle is an open nozzle designed to be integrated into a deluge fire protection system.

The Model TN-17 Nozzle provides protection of coverage areas up to 16 ft - 4 in. x 32 ft - 8 in. (5.0 m x 10.0 m) as compared to standard coverage sprinklers often used in tunnel fire protection system designs having a maximum coverage area of 10 ft x 10 ft (3.0 m x 3.0 m).

NOTICE
The TYCO Model TN-17 Horizontal Spray Nozzle described herein must be installed and maintained in compliance with this document and with the applicable standards recognized by any authorities having jurisdiction. Failure to do so may impair the performance of these devices.

Technical Data

Approvals
UL and C-UL Listed

Minimum Working Pressure
10 psi (0.7 bar)

Maximum Working Pressure
30 psi (2.1 bar)

Minimum Height to Finish Grade
18 ft (5.5 m)

Maximum Height to Finish Grade
40 ft (12.2 m)

Pipe Thread Connections
3/4 in. NPT or ISO 7-R 3/4

Discharge Coefficient
K=16.8 GPM/psi² (241.9 LPM/bar²)

Finish
Natural Brass

Physical Characteristics
Frame .................. Brass
Deflector Screw ............. Stainless Steel
Deflector .................. Brass
Deflector Nut ................. Bronze

Design Criteria

The TYCO Model TN-17 K=16.8 Horizontal Spray Nozzle is intended for integration into a water spray, deluge fire protection system designed in accordance with the applicable standards recognized by any authorities having jurisdiction.

Nozzle Orientation
The Model TN-17 Nozzle must be installed in a horizontal orientation. Refer to Figures 1 and 2.

Corrosion Resistance
It is recommended that the Tunnel Operator be consulted with respect to the suitability of the materials of construction and finish for any given corrosive environment. The effects of ambient temperature, concentration of chemicals, and gas/chemical velocity, should be considered, at a minimum, along with the corrosive nature to which the nozzles may be exposed.

The pipe, fittings, hangers, and hanger components must be suitable for use in the application environment.

Obstructions
The maximum allowable vertical and horizontal distance that the bottom of an obstruction can be away from the Model TN-17 Nozzle is provided in Graph A.

Non-continuous suspended obstructions such as air handlers, lights, and the like are to meet the “4x rule” of Figure 6; within 5 feet of the nozzle deflector in the area below the nozzle, the obstruction must be located four (4) times the longest dimension of the obstruction as defined in Figure 6, to a maximum of 60 inches. No obstructions are allowed to be located within the designated shaded region. Care must be taken to place large obstructions running parallel to the nozzle discharge (i.e., signs) in the areas between the nozzles.
Step 1. Ensure that the Drop Nipple, Tee, Arm-Over Nipples, and Reducers have been properly assembled per Figure 2 prior to installing the Model TN-17 Nozzle.

Step 2. With pipe-thread sealant applied to the nozzle threads, hand-tighten the Model TN-17 Nozzle into the Reducer.

Step 3. The Model TN-17 Nozzle must be tightened using only the W-Type 21 Sprinkler Wrench (Ref. Figure 3). Fully engage nozzle wrench flats (Ref. Figure 1) and wrench tighten. A leak-tight 3/4 in. NPT or ISO 7-R 3/4 sprinkler joint should be obtained by applying a minimum-to-maximum torque of 20 to 30 ft-lb (26.8 to 40.2 N-m). Higher levels of torque can distort the nozzle inlet with consequent leakage or impairment of the nozzle. Ensure the markings on the deflector face towards the ceiling.

Step 4. Repeat Steps 2 and 3 for the opposite side of the assembly.

**Care and Maintenance**

The TYCO Model TN-17 K=16.8 Horizontal Spray Nozzle must be maintained and serviced in accordance with this section.

Before closing a fire protection system main control valve for maintenance work on the fire protection system that it controls, permission to shut down the affected fire protection system must be obtained from the proper authorities and notify all personnel who may be affected by this action.

Nozzles which are exhibiting visible signs of corrosion must be replaced. Care must be exercised to avoid damage to the nozzles before, during, and after installation. Nozzles damaged by dropping, striking, wrench twist/slippage, or the like, must be replaced. Refer to the Installation section for additional information.

The Tunnel Operator is responsible for the inspection, testing, and maintenance of their fire protection system and devices in compliance with this document, in addition to the standards of any authorities having jurisdiction. Contact the installing contractor or product manufacturer with any questions.

Fire protection systems are recommended to be inspected, tested, and maintained by a qualified Inspection Service in accordance with local requirements and/or national codes.

**Limited Warranty**

For warranty terms and conditions, visit www.tyco-fire.com.

**Ordering Procedure**

Contact your local distributor for availability. When placing an order, indicate the full product name and part number (P/N).

**Model TN-17 Horizontal Spray Nozzle**
Specify: Model TN-17 Horizontal Spray Nozzle, K=16.8, (specify) Thread Connection, Natural Brass, P/N (specify):

- ISO 7-R 3/4” .................................. 49-017-2-001
- 3/4 in. NPT .................................. 49-017-2-002

**Sprinkler Wrench**
(separately ordered)
Specify: W-Type 21 Sprinkler Wrench, P/N 56-001-0-686
