NEW CPVC DOCUMENTS

Dear Valued Customer,

As part of an ongoing industry-wide effort, Johnson Controls has made available documents relating to Tyco® BlazeMaster® CPVC fire protection piping system care, installation and compatibility.

These documents have been developed to assist installing contractors in conveying important information to building owners, other trades or anyone involved in handling and storing CPVC products. We encourage you to safeguard your installations by taking advantage of these documents.

Two documents are available:

Jobsite Notice – designed for use during and after construction, the sign notifies of the presence of a Tyco® BlazeMaster® CPVC fire protection piping system and offers guidance on care and compatibility.

Turnover Letter – designed for building owners, the turnover document details important information regarding a Tyco® BlazeMaster® CPVC fire protection piping system including care, compatibility and maintenance.

These documents are available for download on www.tyco-fire.com and printed copies of the *Jobsite Notice* are available by request (please contact your local representative). In addition, similar language appears on product packaging.

Thank you for your support and loyalty. Should you have any questions, please contact me directly.

Sincerely,

Hilary Reese
