melissa.mcclain@tycofp.com**Tyco Achieves ISO 14001 and OHSAS 18001 Certifications**

Neuhausen, Switzerland – 30, June 2016– Tyco Fire Protection Products is proud to announce that their Lubbock, Texas, USA facility has achieved ISO 14001 and OHSAS 18001 certification. SAI Global, a globally recognized and accredited certification body for management system standards, conducted the assessment and certification. This site produces about 25 million fire sprinklers each year.

ISO 14001 is the world's most recognized framework for environmental management systems, widely adopted to assure customers, employees and other stakeholders that the environmental impact of the company is being consistently measured and improved upon. Another prestigious international standard, OHSAS 18001 is an occupational health and safety management system used to promote a safe and healthy working environment. To achieve OHSAS 18001, employees at the site identified and worked to control its health and safety risks, reducing the potential for accidents, aiding compliance and improving overall performance.

“These certifications highlight the environmental health and safety culture that have been long engrained at the Lubbock facility, and reinforce the high value that Tyco places on the well-being of our employees and the environment. With employee participation and ownership of the management system, we were able to simplify compliance at the facility realizing additional economic benefits,” said Marc Turco, Director, Global Manufacturing Operations Water & Mechanical Products, Tyco Fire Protection Products.

In support of this achievement, Tyco will continue to allocate resources that provide training, create forums for discussion, and set measurable targets of the site's ongoing improvements.
