

FOR IMMEDIATE RELEASE**Tyco Training Now Offering CEU Credits**

December 18, 2007 (Lansdale, PA)- Tyco Fire & Building Products announced today that they have become certified as an Authorized Provider of Continuing Education Units (CEUs) from the International Association for Continuing Education and Training (IACET). Tyco, which holds several valuable fire protection training programs throughout the year, offers these CEU credits for both its “General Fire Protection Training” and “Residential Fire Protection Training” courses.

These two training courses also offer Learning Units (LUs) through the American Institute of Architects (AIA) and have DSFM accreditation through the Florida Division of State Fire Marshal; Bureau of Fire Prevention Continuing Education System.

“This is an enormous badge of honor for us. Our training programs now join an illustrious league of organizations -- such as GE, Honeywell, & Achieve Global -- that offer some of the most progressive training programs in the country,” said James Golinveaux, Sr. VP of Codes and Standards for Tyco Fire & Building Products. “Many different professional organizations require their members to maintain a certain level of continuing education annually. We can now assist these professionals through our CEU offerings. “

As regulations and technology continue to change, many fire protection contractors do not realize the financial impact that those changes have on their bottom line. Contractors who have trained their employees on the latest technology can often leverage that skill to be more competitive in the bid process, resulting in increased revenue. Those same contractors often see a jump in design accuracy and overall quality of work, resulting in fewer changes orders and rework and decreasing their overall costs.

Tyco’s fire protection training classes are designed to meet the learning needs of a broad array of audiences - engineers, designers, installers, contractors, home builders, and authorities having jurisdiction. These training sessions are offered at our new state-of-the-art Global Technology Center in Cranston, RI. The training includes classroom learning, hands-on valve training, and fire sprinkler demonstrations in two separate fire test cells. Classes are held for up to 24 participants.

For more information, or to register online for an upcoming class please visit www.tyco-fire.com or call (401) 781-8220 ext. 500.
