### **TYCO ANNOUNCES IMPROVED RED-E CABINET FOR FASTER, SIMPLER INSTALL AND SERVICE** New Design Provides Customers with 13 Feature Enhancements

**LANSDALE, Pa., USA** (July 9, 2015) – Tyco Fire Protection Products, a division of Tyco (NYSE: TYC) and a global leader in fire suppression technologies, recently announced the launch of its improved RED-E Cabinet—a pre-assembled fire protection valve package enclosed within a free-standing cabinet. Ideal for areas without a dedicated valve room, the RED-E cabinet is designed to occupy minimal floor space and provide an enclosure for the fire protection valve riser.

This product redesign brings substantial improvements. The new RED-E Cabinet, with 13 feature enhancements, makes installation and service even easier and more cost-effective. Among what's new to the cabinet, a splash-proof drain cup that is designed to be fail-safe should drain blockage, easier access to couplings, and aligned supply and drain headers across all cabinet sizes.

"We listened to the market and made our successful solution even smarter," said Gijsbert Van Rooyen, global product manager at Tyco Fire Protection Products. "The redesigned RED-E cabinet was a response to features our customers have been asking for. We kept all the best of the recognized RED-E cabinet, like the industry-leading DV-5 valve, and added enhancements that resulted in designing a solution that's easier to install and service, combined with trusted performance. It's simple on the outside, effective on the inside—that's in a nutshell the essence of the RED-E Cabinet."

The cabinets are UL and C-UL Listed, and are available for the following system types: deluge with electric actuation, deluge with dry pilot actuation, deluge with wet pilot actuation and pre-action.

For additional information regarding the RED-E Cabinet solutions, please contact your local Tyco sales representative, or visit [www.Tyco-Fire.com](http://www.Tyco-Fire.com).
